

A picture taken in 1920 of a demonstration of the ruggedness of Overland cars. The number plate, DB AC1 is a general identification mark, the pre-1921 format for trade plates issued by Stockport (code DB), one of the many pictures used to illustrate this book.

The British registration system was introduced under the Motor Car Act 1903. John Harrison, an acknowledged expert on the subject, has written about the system's history and the different sorts of number plates such as personal plates, trade plates and diplomatic ones issued. Also included is a chapter advising those who want their own personal plate how best to obtain one.
